

Kanban

implement agile and DevOps software development

Kanban is a method for managing the creation of products with an emphasis on continual delivery while not overburdening the development team. Like Scrum, Kanban is a process designed to help teams work together more effectively.

This framework is highly productive and effective to run

- Ad-hoc Requests,
- Unplanned works,
- Production Support
etc.

Its a Method of Visualize the flow of work.
in order to balance demand with available
capacity and spot bottlenecks

Movie Theater.
2 Hours Show

Show Duration : **2 Hours**
Each.

Max Seat Capacity : **50**

Show Start and End on
Scheduled date and Time

People for Future Show

People Watching Current
Show

People Recently watched
a Show

People watched
a Show earlier

Sprint of 2 Weeks

Sprint Duration : **2 Weeks**

Max Capacity : **Team**
Capacity in Hours

Sprint Start and End on
Scheduled date and Time

Backlog, Multiple
Stories

Planned stories are in
execution

Past Sprint

Past Sprint

SCRUM

Public Waiting outside to get in the park

Public Park - Open 24 Hrs

~~6 People waiting out side~~
6 People inside the Park

People already visited the park

Show Duration : **No Defined Show Time**

Max Capacity : **Unlimited**

Start and End on : **No Defined start and End Time**

Park Rule : **Max 6 Persons at a time**

Active Backlog

Kanban Board - Open 24 Hrs

6 Top priority Story in Progress

Stories Completed

Board Duration : **No Defined Show Time**

Max Capacity : **Unlimited**

Start and End on : **No Defined start and End Time**

Board Rule : **Max 6 stories at a time.**

Understand Kanban – Scrum Vs Kanban

Scrum

Kanban

Cadence / Delivery

Regular Time box in Sprints

Continuous Flow

Release Frequency

At the end of each time box or later

Continuous delivery

Roles

Scrum Master, Product Owner,
Development Team

No defined Roles except the
development team, Some team
consult with Agile Coach

key Metric

Velocity

Cycle Tyme

Scope

Scope planned at Sprint Planning,
in a batch with bundle of works

Work pull into the system , one by
one

Change Mechanism

Scope planned at Sprint Planning,
No Changes allowed mid sprint

Changes can be made any time.

Applicability

More appropriate in situations
where work can be prioritized in
batches that can be left alone

More appropriate in operational
environments with a high degree
of variability in priority
